DASC Public

Why DASC?

We have domain led experience and knowledge.

DAS Consulting has a considerable heritage of providing implementation and business improvement services to SAP ERP clients.

We specialize in SAP implementation projects for Asset Intensive industries.

Energy and Natural Resources

Aerospace and Defense

Defense and Security

Industrial Manufacturing

Public Sector

Domain Experience & Knowledge

We provide professional services experienced in ERP projects for Asset Intensive industries. Naturally our resources are positioned to support Engineering, Maintenance, Supply Chain and Configuration Management.

Why is domain led experience and knowledge important?

Complex information systems such as SAP ERP integrate data from all business areas in the organization. It stands to reason that SAP ERP implementations should be business led.

We value our SAP ERP implementation resources that have experience in a business stream such as Engineering, Maintenance, Supply Chain, Configuration Management. This allows them to better understand business requirements and interpret these requirements into business process and functionality with the insights they have experienced over several implementations.

Risk Mitigation

Many organizations view SAP ERP as a potential, vital and crucial solution for their business to gain efficiency, effectiveness, and become more competitive.

However, Information technology (IT) project failure is an unfortunate fact for many organizations, and SAP ERP projects are no exception to many failures.

SAP ERP implementation has great benefits but can be disastrous for organizations that fail to manage the SAP ERP implementation process.

Many SAP ERP clients still get it wrong. Gartner estimates that 55% to 75% of all SAP ERP projects fail to meet their goals.

There are many causes for these failures however to mitigate many of these risks remember:

“Your solution is only as good as the experience of the people doing it”

Services

DASC has a considerable heritage of contributing to SAP implementation projects, upgrades and improvements in asset intensive industries.

We can provide:

- Functional architects
- Consultants
- Data management specialists
- Change management specialists
- Training specialists

DASC is an Open Eco System Partner of SAP. This provides us with the opportunity to access knowledge of SAP solutions so that we can propose alternate and improved support of your business.

Partners & Products

DASC people have been around for a while and have seen many issues that needed to be addressed. Some needed that little bit extra to be resolved, hence we have partnerships with several vendors whose products we know provide the value of better solutions.

ERP Simulations

Allows you to experience the future - hands-on, today...

Enables rapid GenAI & ML use case deployment...

ERPsim®

A competitive business simulation experience to gain understanding of SAP ERP and the business value of SAP providing real-time analytics and reports with actionable insights.

These events are experienced by competitive teams, with some versions available as on-demand versions for single players or small teams.

Digital Acceleration System

DAS is a family of capabilities that work together to provide in-application training, guidance, and support through content and collaboration. Users see an entire end-to-end process, so they understand their role and that of the application in the organization's success.

SmartDAS — Gen AI-ML Workbench

What if you could integrate Gen-AI and Machine Learning into any SAP solution?

This could be done by business analysts, without hard-to-find deep SAP technical skills. The solutions you build could co-exist with SAP proprietary technologies and be deployed across multiple landscapes - all operating on secure cloud infrastructure supported by all hyperscalers.

Build custom use cases in production in days rather than months - supporting global roll-out in multiple languages.

Language Localizer for SAP

Baton's DAS Language Localizer simplifies language localization of web-based enterprise software, eliminates language barriers, and accelerates adoption across international markets and organizations.

Language Localizer for Ariba

Baton's DAS Language Localizer simplifies language localization of SAP Ariba modules – Buyer, Supplier, Guided Buying, by eliminating language barriers, and accelerating adoption across international markets and organizations.

Data Management

Join 12,000 companies in 100 countries that trust their data to Precisely.

Automate Evolve

Be more agile with a flexible, extensible solution architecture

Automate Evolve is the only automation platform designed to digitize strategic data processes—like plant maintenance and material masters.

With Automate Evolve, you can support the different SAP process and data needs of your regions, product lines, or business units in one workflow solution—giving you maximum flexibility and enabling you to digitize faster and make a greater impact.

Automate Studio

Data Creation, Maintenance and Transformation, Data Migration, Data Integration

Automate Studio is the premier Excel-to-SAP solutions platform that enables business users to automate complex SAP business processes and make mass data changes quickly and easily.

Training every functional employee to use SAP or finding temporary workers with SAP experience can be difficult and expensive. Automate Studio eliminates this challenge by enabling business users to run and manage SAP ERP tasks simply and securely from Excel or Web Forms.

Maintenance Plan Development

Expert Decision Support Methodologies to Improve Industrial equipment reliability AND reduce costs using our business-based processes RCM Turbo and SOS

RCM Turbo™

RCM Turbo™ is an effective and efficient way of defining or optimizing Maintenance Strategy and Tactics, based on risk of operational non-availability and overall cost including lost production. A structured and easily deployable approach to RCM but much more... expert criticality assessment, optimized frequencies, workflow smoothing, grouped workflow optimization and extensive failure mode libraries.

Spares Optimization System (SOS)™

Together with Reliability and Availability, Maintainability is key to reducing operational non-availability due to stock-outs. SOS™ does not rely upon recorded history. It is an expert system which bases its recommendation about spares holdings from the input provided by the assessors and RCM Turbo™ analysis by selecting answers to several carefully structured questions. A combination of expert logic and assessment of economic order quantity,

balanced with business cost/risk analysis, ensures that the optimum level of spares is recommended.

Spares Cataloguing

PT. Panemu Solusi Industri is a software house company with more than 10 years of experience in providing reliable digitalization and information technology solutions, as well as an official Odoo implementation partner in Indonesia.

Spares Cataloguing System

Spares Cataloguing System (SCS) is a specialized software tool designed to help organizations manage their asset information at the component level—particularly MRO (Maintenance, Repair, and Operations) items.

Built with a structured, step-by-step workflow, SCS ensures that material descriptions are clean, complete, and most importantly, free from duplication. The system can also be customized to align with your existing standards, rules, and specific business processes.

For industrial and process-driven organizations with multiple plants and tens of thousands of MRO parts, SCS has delivered proven results. Our solutions have helped customers achieve significant cost savings by optimizing their MRO data, improving operational efficiency, and securing their bottom line.

Prevent duplicate materials, optimize your inventory, and secure your operational efficiency with Panemu SCS.

Cyber

Guardware products are a portfolio providing solutions for Cyber Protection, Visibility & Control of Lost, Stolen, Hacked & Shared Sensitive Data.

Guardware Insight

Eliminating data blind spots - Gain ongoing visibility into how data moves within the organisation, detect the unusual! Address risky employee actions through visibility and education.

Guardware Protect

Ensure your data remains encrypted and secure, even if stolen, preventing costly intellectual property theft.

Guardware Discover

Identify and classify your sensitive data, including all file types such as text and images related to sensitive data including PCI and PII, ensuring you know where it resides.

Guardware Assessor

Identify and classify your sensitive data, including all file types such as text and images related to sensitive data including PCI and PII, ensuring you know where it resides.
